CeramOptec in India: Participating in the Laser World of Photonics India

CeramOptec travelled to Bengalur, India from August 21 to 23, 2016, where, we participated in the "Laser World of Photonics India" trade show.

The trade show encompassed the entire range of the photonic industry - including components and manufacturing parts – and represented us with a unique opportunity to intensify our contacts on the Indian market. CeramOptec was represented with its own booth for the second time and on this occasion, the new Optran® UV NSS-Fiber was the centerpiece of our exhibition.

The CeramOptec booth

Beyond that, trade show visitors of course had the opportunity to familiarize themselves with additional samples from our product range and used the provided data sheets to learn more about the technical details of our assortment of individual fiber categories.

The trade show also offered the perfect background for CeramOptec associates to establish new contacts. Due to the high attendance rate, the show turned into a very successful event for CeramOptec and the team is looking forward to our next visit to India.
