

Trade fair review Optatec 2018

The Optatec 2018, an international specialist trade fair for optical technologies, components and systems, took place in Frankfurt am Main from 15th to 17th May. Here, 540 exhibitors from 32 nations presented their products to the almost 6000 visitors who had travelled from 45 countries. CeramOptec GmbH was also represented with their generously-sized trade fair stand, where objects and models were on display such as the Optran® UV NCC or the Optran® UV/WF fibre and display objects from the world of cable manufacturing.

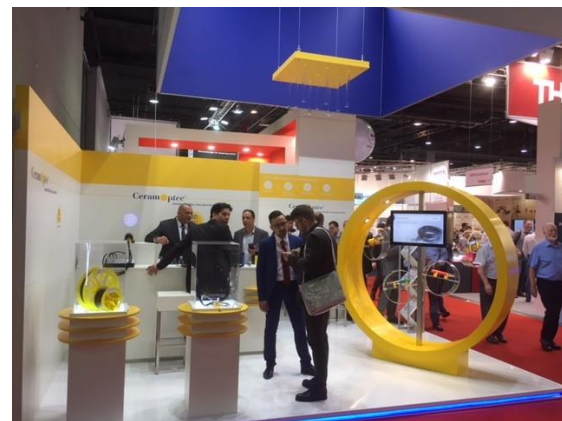

Trade fair stand at the CeramOptec

Presentation of optical fibres

Due to its internationalism, the trade fair provided an excellent opportunity to establish new contacts and to maintain existing business relationships. The offers provided at the trade fair ranged from products, detailed and system solutions, right up to applications from the wide field of optical technologies. Optical construction elements, optomechanics, fibre optics and fibre optic cables, laser components, coating technologies, and in particular, the key technology of photonics were represented here as well as systems for additive production, industrial image processing and optical measurement technology.

As with the trade fair itself, CeramOptec was able to sum up the event extremely positively and welcome a consistently high number of visitors to the stand. Jose Corceiro from Optical Business & Services - Fiber, who was recently employed as Distributor in France, was also present in Frankfurt and available as a dialogue partner for visitors.

Visitors at the trade fair stand

The trade fair team

We wish to recommend a visit to the SPIE Optics + Photonics from 21st – 23rd August 2018 in San Diego, USA. Here, CeramOptec will be represented at the stand of their Distributor US Fiberoptec (Stand No. 434). We look forward to seeing you there!
