

CeramOptec at *Laser World of Photonics India* and *enova 2018*; *Expo Welding 2018* and *Laser Taiwan* trade show visits

CeramOptec had its own trade show stands at the **Laser World of Photonics India** in Bangalore from 26 – 28 September and at the **enova** in Paris (France) from 23 – 24 October. In cooperation with the respective regional distributor, CeramOptec exhibited its wide portfolio of different fibres, cables and bundles at both shows.

Our trade show stand in Bangalore, shared with our Indian cooperation partner **New Age Instruments & Materials (P) Ltd**, focused mainly on the fibres Optran® UV NSS and Optran® UV NCC.

Joint CeramOptec stand at the enova (Paris) and the French distributor

Stand at Laser Taiwan

CeramOptec also exhibited together with its French distributor **Optical Business & Services – Fiber** in France; this trade show stand was also extremely successful. Both of these trade shows in France and India are major events that function as important information platforms for the respective national and the international market.

In mid-October, CeramOptec also visited **Laser Taiwan** (17 – 19 October) and **Expo Welding 2018** in Poland (16 – 18 October). Both trade shows have gradually evolved into the most important shows in their particular industry in these countries over

the past few years. There were many interesting presentations that gave CeramOptec plenty of inspiration and numerous ideas.

We would be delighted if we could once again welcome you to our trade show stands in 2019.
