

Successful trade fair appearance at the Laser World of Photonics Munich

Laser World of Photonics in Munich is one of the industry's leading photonics trade fairs and brings together international experts, on the exhibitor and visitor side alike. This year's trade fair welcomed a total of 1,325 exhibitors from 40 countries, including CeramOptec, who were represented with an upgraded booth.

The focus of CeramOptec's booth was on the new Safety Fiber, which offers a considerable increase in safety when working with high-power lasers. This is achieved through two copper wires integrated into the fiber jacket, which act as immediate circuit breakers in the event of a fiber fracture.

Highlight of this year's trade fair appearance: the new safety fiber

Fiber models for presentation

In addition, the many visitors to CeramOptec's booth were shown the entire range of fibers, both original as well as magnified versions, as well as various cables and bundles. Many new contacts were made and existing ones fostered and further developed during the four-day trade fair.

Holger Bäuerle, deputy managing director of CeramOptec, sums up event as follows: "Laser World of Photonics offers interactions at the highest level. For CeramOptec, that makes it the most important fair when it comes to presenting our specialized products in a targeted manner."

With 'Safety Fiber', our innovative product, we once again achieved success. We greatly welcomed the visit of experts to our booth, who are vital partners in our development and provided us with food for thought".

CeramOptec's trade-fair booth

The next Laser World of Photonics in Munich is scheduled to take place from June 21 to 24, 2021 and CeramOptec is looking forward to welcoming you once again and presenting our latest highlights at our stand.
